Window On the World screens

**FARAM**

*“Faram has designed a series of solutions to ensure the separation and protection of people in **workstations** where **safe interaction** is required, according to the new social distance protocols.”*

They are designed in order to ensure the **tightness of screens of different sizes and weights, starting from resistant and easy-to-clean materials**, which do not scratch, dull or color change, due to exposure to sunlight or contact with chemical agents.

They are all **without gaskets**, as a receptacle for dirt, difficult to clean and at risk of deterioration with the use of aggressive chemicals. The gasket color also changes over time, if exposed to sunlight.

**FARAM****Freestanding screen W.O.W. with floor support**

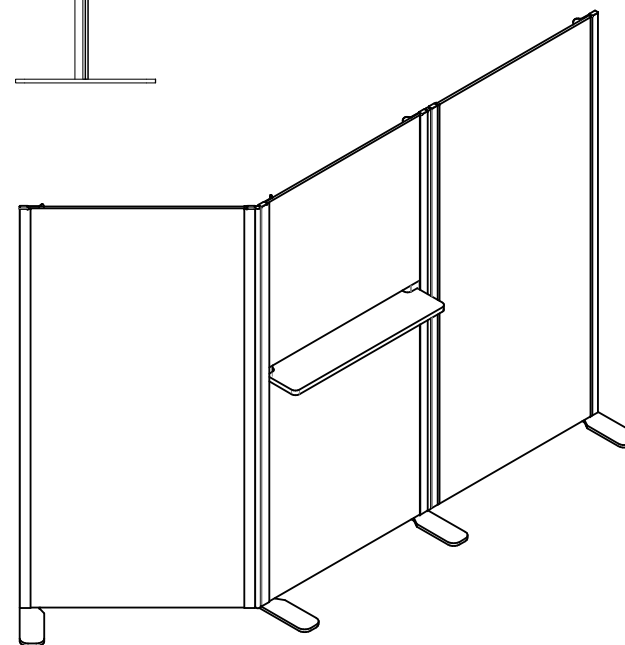

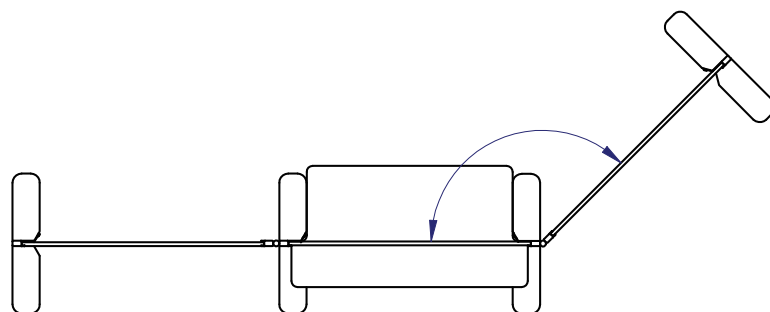

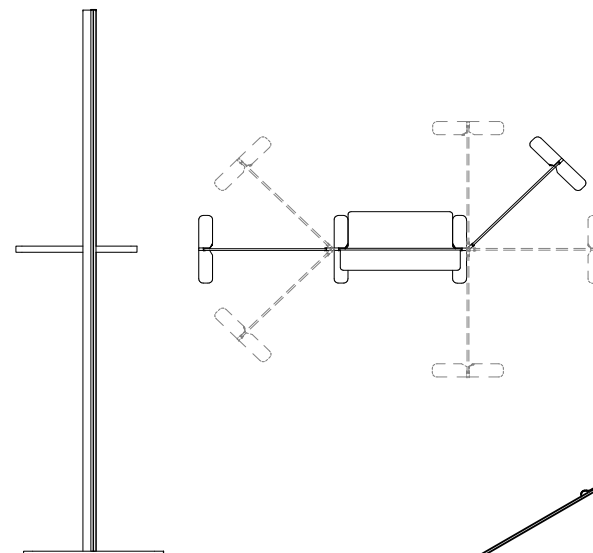

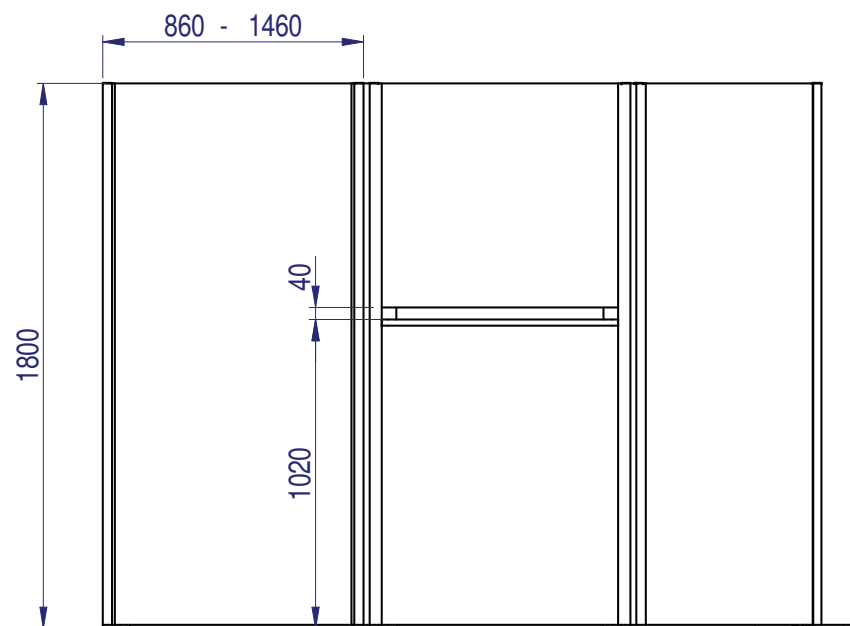

Self-supporting structure with aluminum profiles that support the glass. It can be placed next to existing desks or counters to protect the operator interacting with the public. Materials

Our structures are suitable for the use of materials with different characteristics. In the glass version, it is tempered and with rounded edges. It can also be transparent, with film or with etched serigraphy.

Glass is the most easily sanitized material, with high levels of resistance over time and recyclability, it can maintain its characteristics of transparency and healthiness, despite repeated cleaning cycles and no-stop use. Glass is the material strongly recommended by Faram.

WHO FARAM 1957 IS

Founded in 1957 in Giavera del Montello, northeast Italy, in just over a decade it has become one of the international leaders specialized in the design and production of partitions and office furniture systems.

Today it makes available its experience gained also thanks to the “Collectivity division”, created in 1995 for the supply of hospital facilities and other entities that required specific solutions for community structures.
